

1     **WHAT IS CLAIMED IS:**

2             1. A detachable lampshade comprising:

3             an upper ring;

4             a lower ring parallel to the upper ring, the lower ring having a center, a  
5     hub at the center of the lower ring and a plurality of linkages extending from the  
6     hub and connected with the lower ring;

7             a plurality of shades, made up of an elastic material, bent to provide  
8     outside the upper ring and the lower ring, each shade having two rods  
9     respectively provided at two sides of the shade; and

10            multiple junction tubes mounted between the upper ring and the lower  
11     ring, each tube having a channel longitudinally defined through an outer  
12     periphery of the tube, an upper slot and a lower slot transversally defined at a  
13     diametrically opposite side of the channel for respectively locating the upper  
14     ring and the lower ring, the adjacent rods received in the respective tubes  
15     through the channels and positioned between the upper ring and the respective  
16     upper slots, and between the lower ring and the respective lower slots.

17            2. The detachable lampshade as claimed in claim 1, wherein each of the  
18     shades has two upper notches respectively defined at two upper corners adjacent  
19     to the rods, and two lower notches respectively defined at two lower corners  
20     adjacent to the rods.

21            3. The detachable lampshade as claimed in claim 1, wherein each of the  
22     tubes has two fasteners provided at two ends thereof.

23            4. The detachable lampshade as claimed in claim 3, wherein each of the  
24     fasteners has two elastic members to abut the respective rods for preventing the

1 rods from moving longitudinally in the tubes.
